

IN SEARCH OF RESEARCH PARTICIPANTS

Researchers from the Department of Neurosurgery, John Radcliffe Hospital and Wearables group at the University of Oxford are in search of adult volunteers (18+ years old) to serve as research participants in a study involving the use of wearable physical activity monitors .

You will first attend a 30-minute online meeting with the researcher to set up the activity monitor. You will wear one activity monitor, on your dominant wrist for a 7-day period while going about your usual routines.

The information collected from this study will contribute to improving activity and gait detection using wearable sensors in large-scale medical studies.

If you are interested in finding out more information or taking part in the study, please contact Dr. Shay Sivanathan at shay.sivanathan@ouh.nhs.uk
